LIBRARY AUTOMATION

Automation in our library is an important step in library management. It is an Integrated Library Management system. It has all functional modules like Acquisition, Classification, Cataloguing, Circulation, Article indexing, Online Public Access Catalogue and Administration.

SMIDS Library is partially automated. Automation was initiated in the year 2006. The name of the Software is **Auto Lib**. Students (UG & PG) and Staff members are using the library by means of Online Public Access Catalogue. It helps the library user's queries about author, title, publisher and subject easily and quickly.

The software installed in the library provides proper and updated information to the user. That is, it is the source of the right resource, right information at right location and on right time. This Software saves the time of the User.
